OEE Alert is a browser-based Intranet application that lets you see **ALL** of your Vorne XL Productivity devices on a single screen.

Using both the XL Bolt-On Data Collector and direct access of your XL devices, we provide you with both up-to-date operational information as well as a historical perspective.

Views include:

- Production state** (Run, Down, Standby, Setup) over time, as well as summarized by state, for any period.
- Hour-by-hour statistics**, showing how well your assets are doing from hour to hour.
- Reason code summaries**, showing your top 5 or 10 most common down reasons for all devices, for any period.
- Direct display** of the current data on the Vorne display.

OEE Alert Prerequisites

The application requires the [XL Bolt-On Data Collector](#) to be installed with a version of MSSQL server database and the IIS webserver (can all be on one PC). The application requires IE8 or higher, Safari, Opera, Firefox or Google Chrome, with JavaScript enabled. This application can be customized to your specific requirements.
